RISE
WHAT WE KNOW.

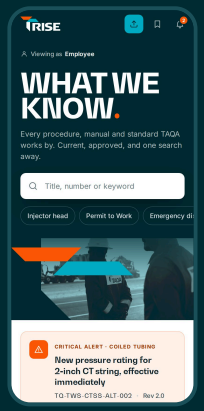

DESIGN REVIEW · OCTOBER 2026

Six design directions for RISE.

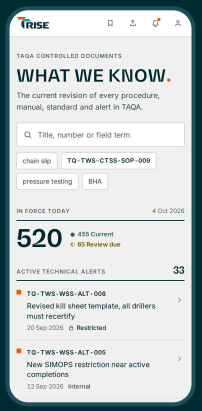

How TAQA's controlled-document and field-knowledge platform could look and feel, on the phone and on the desktop.

ABOUT THIS CATALOGUE

What RISE is, and what we need to decide.

RISE is where about 5,000 TAQA employees find the current, approved version of every procedure, manual, standard and technical alert before they start a job. It is also where documents are filed, checked by QMS and approved.

The system already works. This catalogue is about how it should look and feel, so that it is trusted in the field, easy to use on a phone, and clearly a TAQA product.

We explored six directions in two rounds. Every direction shows the same real RISE content, so the comparison is about design, not data.

520 documents in force	25 areas across the company
33 active technical alerts	~5,000 employees, field and office

ROUND 1 · A, B, C

Desktop-first, premium product directions. Feedback: too dense for a phone, and the RISE brand should stand out more.

ROUND 2 · D, E, F

Designed for the phone first, with fewer elements per screen and a strong, distinctive RISE brand moment. Each then scales up to the desktop.

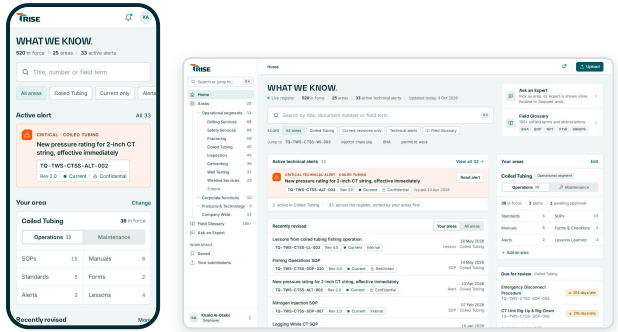

> Nothing in the live RISE system has been changed. All existing functions and business rules (approvals, QMS checks, separation of duties, Arabic translations) are kept in every direction.

AT A GLANCE

The six directions, home screen on the phone and on the desktop

A Instrument

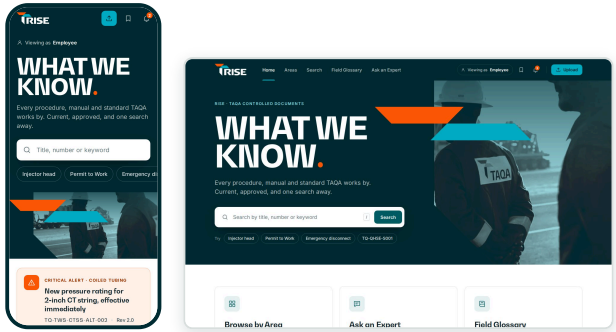

Round 1

A precise work tool, built around the document register.

B Flagship

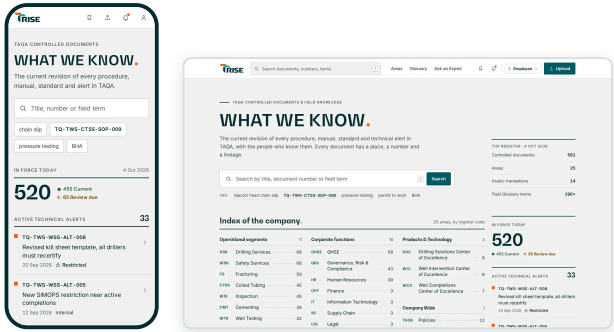

Round 1

A premium flagship product with large type and TAQA field photography.

C Atlas

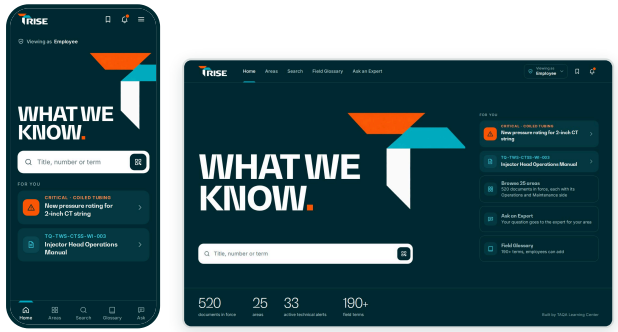

Round 1

A calm reference library that makes every document's status and history clear.

D Beacon

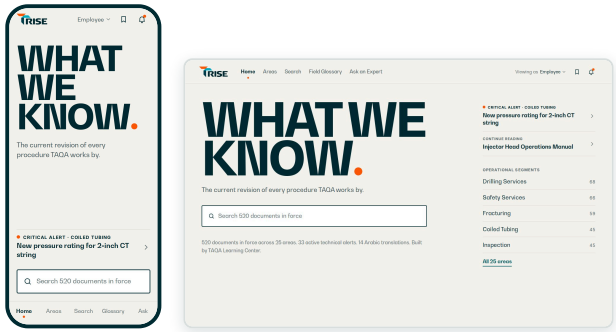

Round 2

Dark and dramatic: the logo's colours are the only light on the screen.

E Full Stop

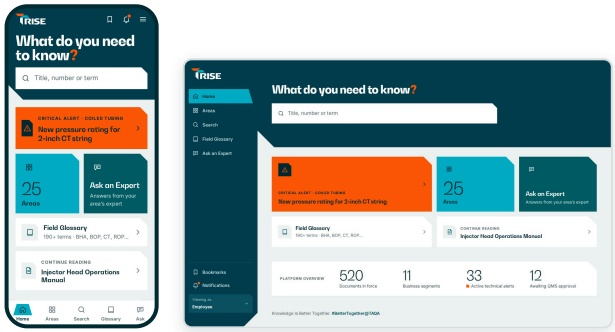

Round 2

Light and typographic, with the orange full stop as the only accent.

F Rise

Round 2

The logo becomes the interface: colour tiles with the logo's 45° cut.

ROUND 1 · A · INSTRUMENT

A Instrument

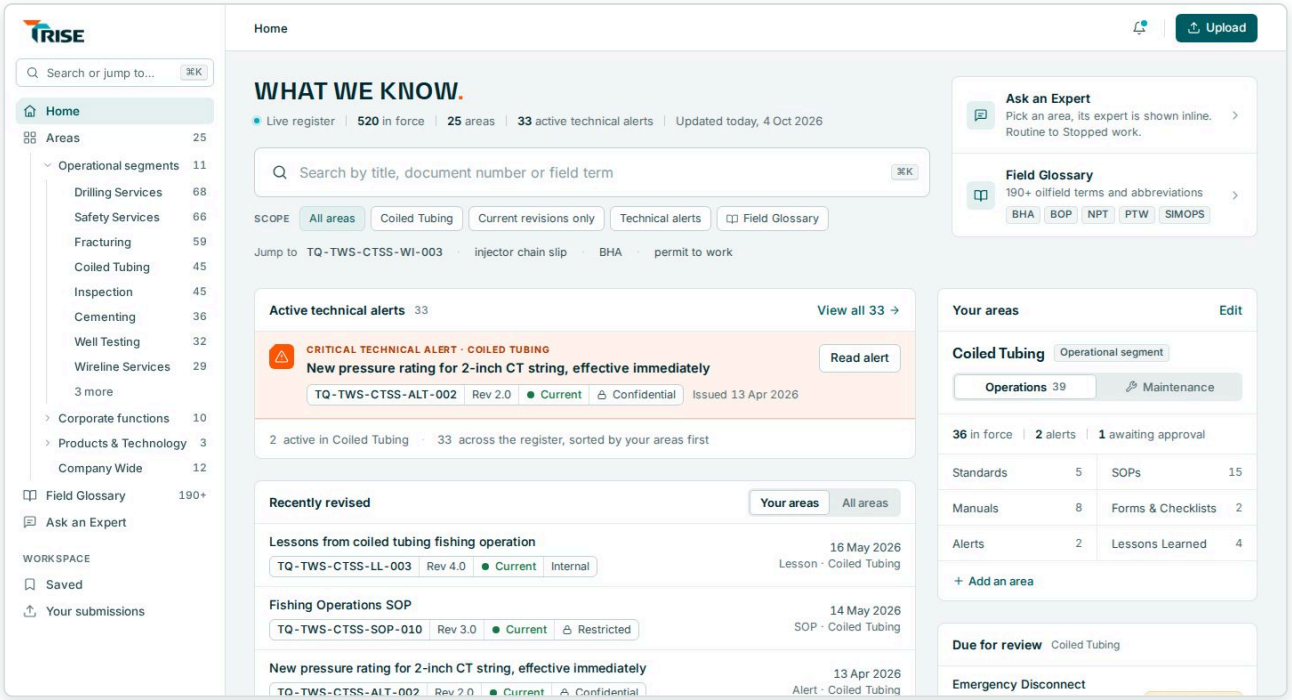

A precise work tool. The document register is the hero: a calm app with a side menu, dense tables and the same layout for every role.

WHY IT WORKS

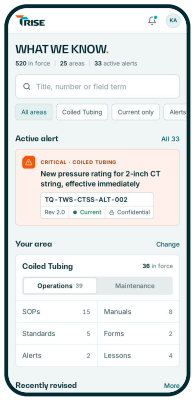

- The fastest way to scan many documents and check their status.
- Handles the heaviest work (QMS checks, approvals, audits) without new screens.
- Every role sees the same layout, so training is simple.

WATCH OUT FOR

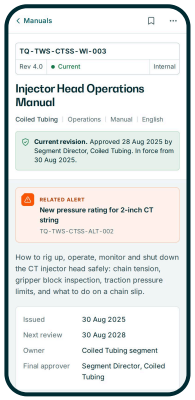

- The quietest brand of the six: little emotion, no photography.
- Heavier on the phone than the round 2 directions.

ROUND 1 · B · FLAGSHIP

B Flagship

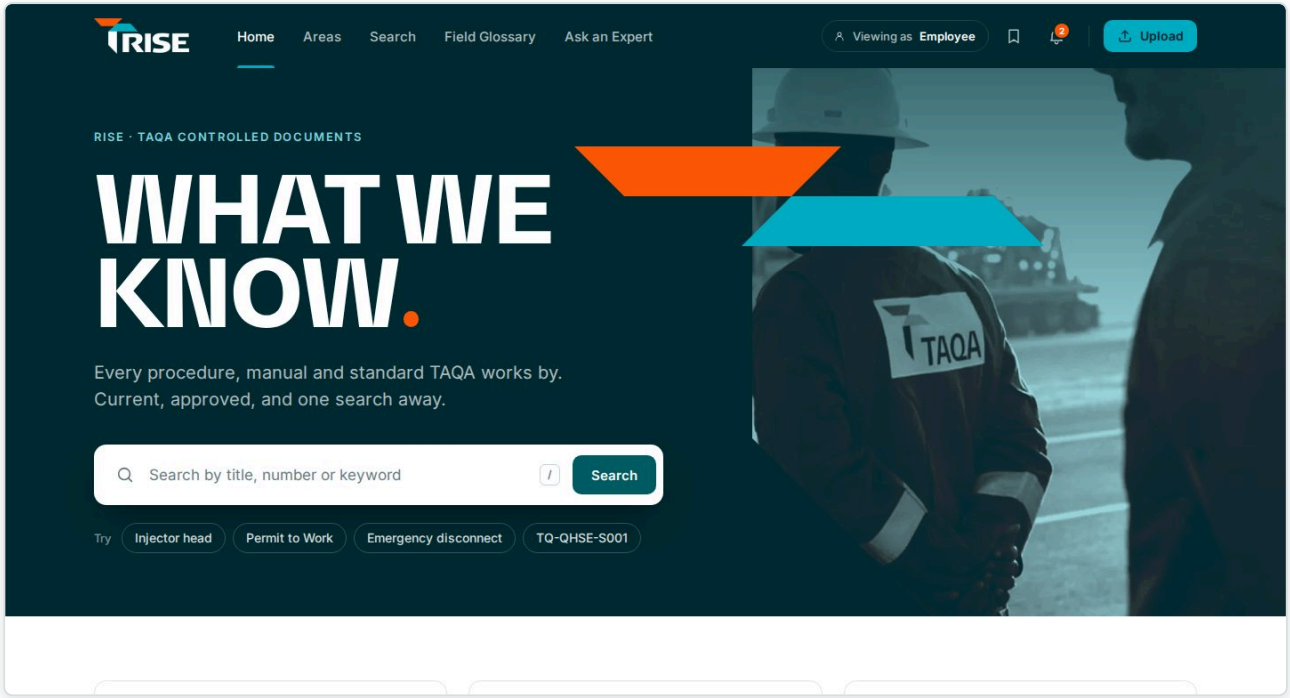

RISE as TAQA's flagship product: WHAT WE KNOW. set large, deep ink bands and real TAQA field photography, like a premium annual report.

WHY IT WORKS

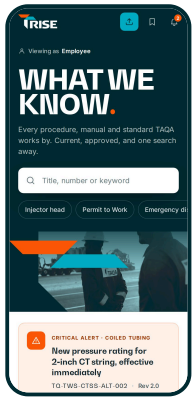

- The strongest sense of pride and the most premium first impression.
- One big idea per screen, so pages are easy to read.
- Uses the logo's own colours and shapes throughout.

WATCH OUT FOR

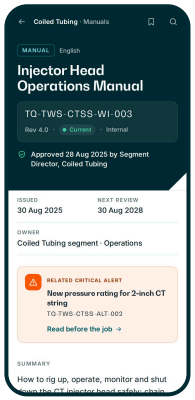

- ○ Shows fewer documents per screen.
- ○ Could drift towards a marketing website if the style spreads.

ROUND 1 · C · ATLAS

C Atlas

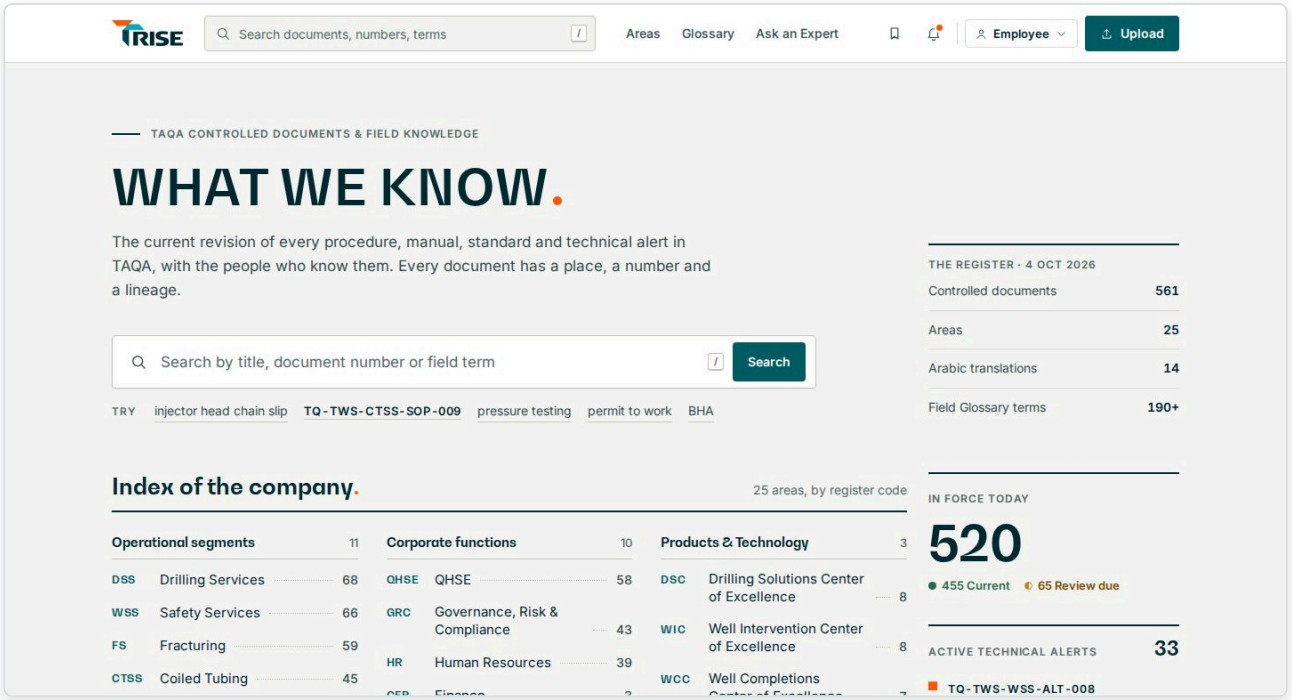

A reference library. Every document has a place, a code and a history, presented with the clarity of a technical publisher.

WHY IT WORKS

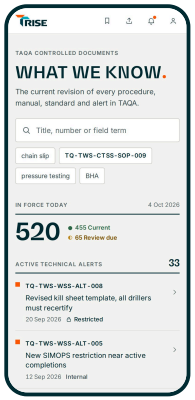

- The best reading experience and the clearest proof that a document is current.
- The approval history reads like a family tree, which builds trust.
- Teaches people the document numbering system as they use it.

WATCH OUT FOR

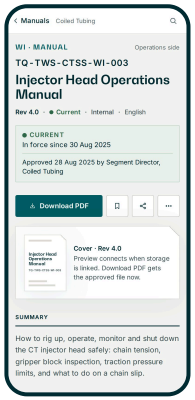

- ○ A quieter brand moment; it relies on typography.
- ○ Less dense than Instrument for heavy QMS work.

ROUTING

QMS check (concept)

ROUND 2 · D · BEACON

D Beacon

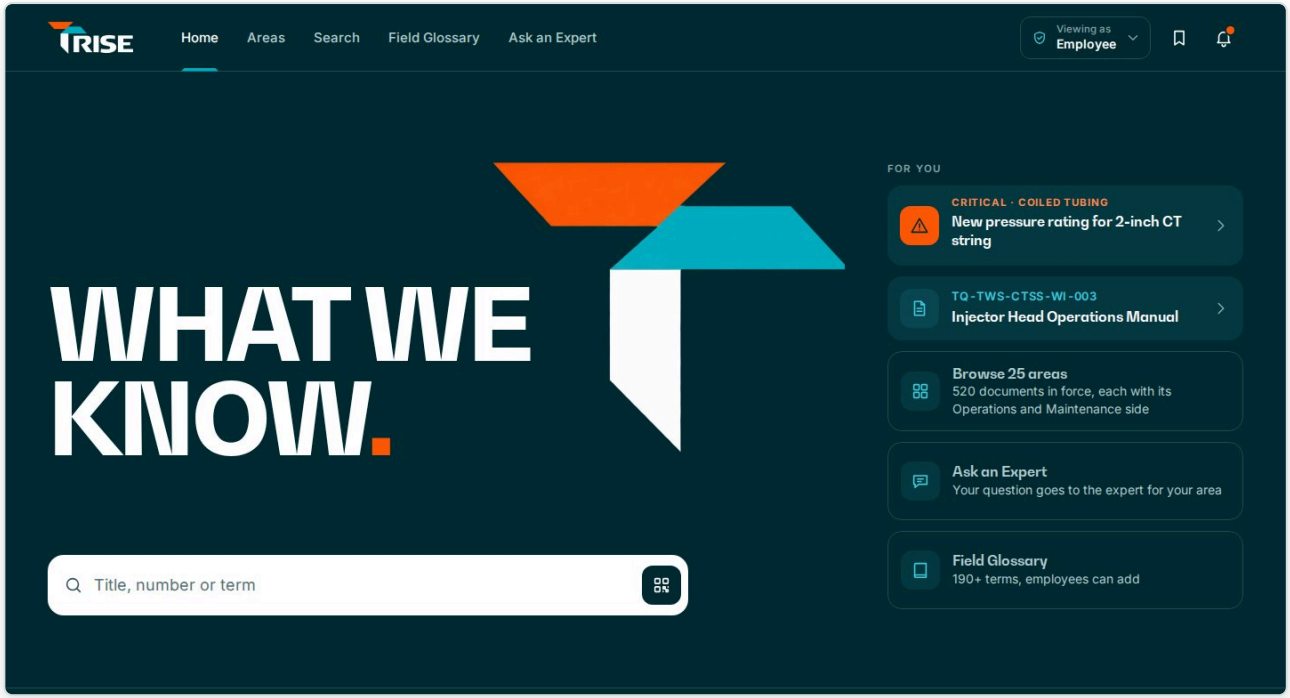

RISE as a lit signal. The deep ink of the logo is the background, and the logo's own colours are the only light. The logo assembles on screen when the app opens.

WHY IT WORKS

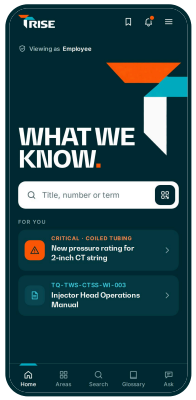

- The strongest first impression of the six.
- The phone home shows only three things: search, the critical alert and the last document opened.
- Calm and very legible in control cabins and on night shifts.

WATCH OUT FOR

- ○ Dark screens are harder to read in direct sunlight on site.
- ○ Long procedures switch to a light page for reading.

Field Glossary

ROUND 2 · E · FULL STOP

E Full Stop

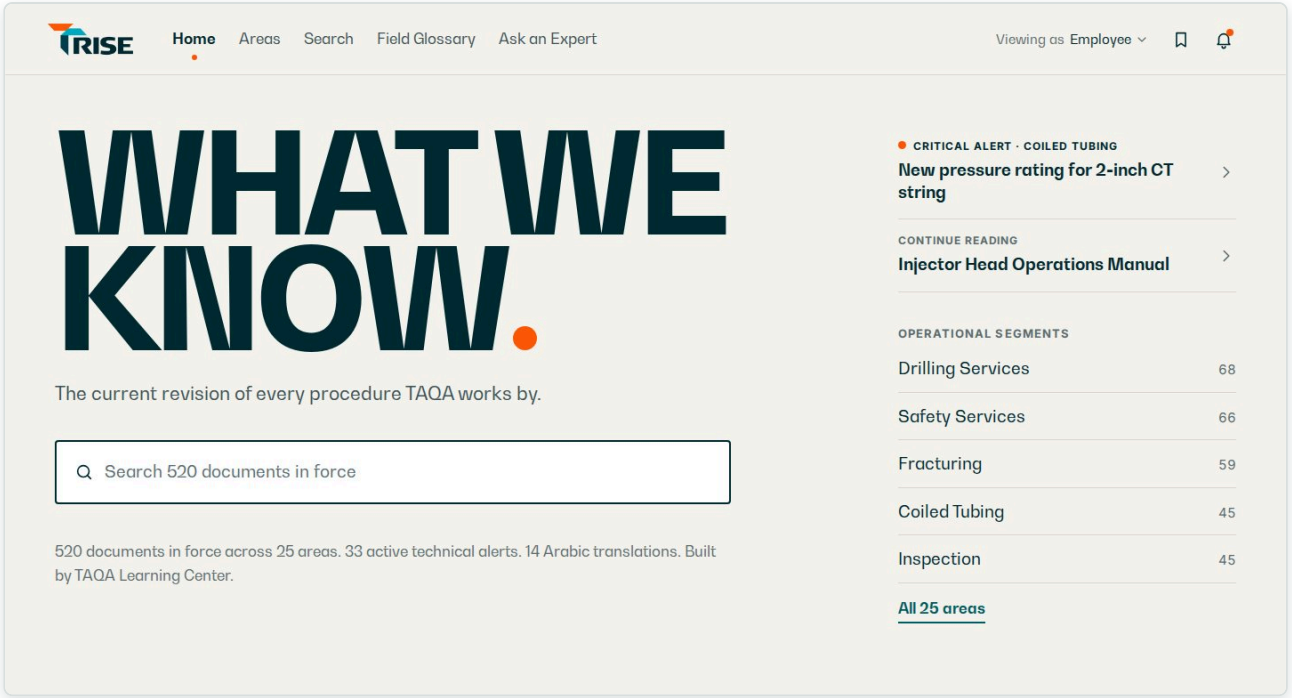

Typography does the work. One typeface on warm paper, and the orange full stop from WHAT WE KNOW. is the only accent in the whole product.

WHY IT WORKS

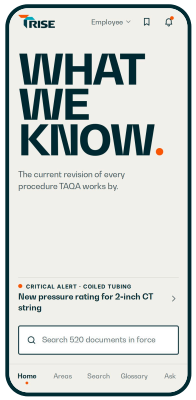

- The calmest, most readable screens of the six.
- The orange dot marks what matters: the active tab, alerts, new notifications.
- Trust is written in plain sentences: "Current. Approved 28 Aug 2025 by Segment Director, Coiled Tubing."

WATCH OUT FOR

- ○ The brand depends on the TAQA typeface loading correctly.
- ○ Some may find the first screen too empty.

Field Glossary

ROUND 2 · F · RISE

F Rise

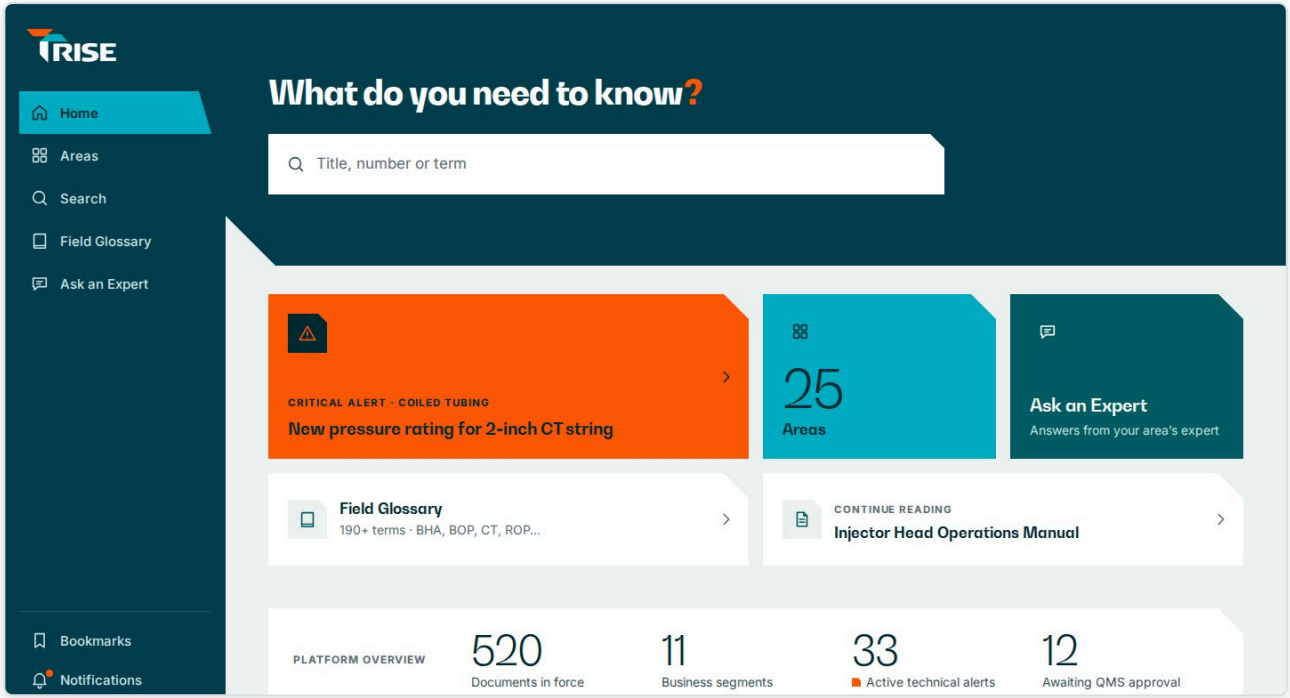

The logo becomes the interface. The teal pillar is the header (a side rail on desktop), the orange and cyan bars become colour tiles, and every tile carries the logo's 45° cut.

WHY IT WORKS

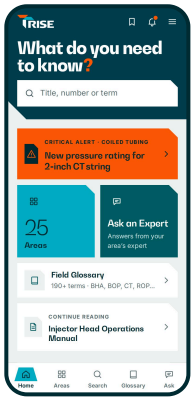

- The most recognisable brand of the six, on every screen.
- Big, glove-friendly buttons for field use.
- Each colour has one job: orange means alert, cyan means action.

WATCH OUT FOR

- Colour blocks are loud; the "orange means alert" rule must be strict.
- Tiles show fewer items, so busy screens switch to lists.

Home on the desktop

COMPARISON

The six directions side by side

	A Instrument Round 1	B Flagship Round 1	C Atlas Round 1	D Beacon Round 2	E Full Stop Round 2	F Rise Round 2
Look and feel	Precise work tool	Premium flagship, photography	Reference library	Dark, the logo glows	Light, typographic, calm	Bold colour blocks
Brand presence	Quiet	Very strong	Moderate	Very strong	Strong but subtle	Strongest
On the phone	Works, but dense	Good, long pages	Good	Excellent, very few elements	Excellent, the calmest	Excellent, big buttons
Brand moment	None	Large statement and photo	Typographic masthead	Logo assembles on opening	Statement builds on home	Screen rises into the logo
Strongest at	Heavy QMS and audit work	Pride and first impression	Reading and trust	First impression, night shifts	Reading and trust	Field use with gloves
Best suited to	QMS, directors, auditors	Company-wide pride	Everyone who reads procedures	Field crews, control rooms	Everyone, on any device	Field crews with gloves
Main risk	Feels like generic software	Fewer documents per screen	Can look plain	Glare in direct sun	Can feel empty	Needs strict colour rules

DECISION

What we are asking for.

Choose one direction to take forward, or a combination of two (for example the calm typography of Full Stop with the opening moment of Beacon).

A SIMPLE WAY TO CHOOSE

If field use on the phone comes first	**Rise (F) or Full Stop (E)**
If brand pride and first impression come first	**Beacon (D) or Flagship (B)**
If reading and trust in documents come first	**Full Stop (E) or Atlas (C)**
If heavy QMS and audit work comes first	**Instrument (A)**

WHAT HAPPENS NEXT

1. **Complete the chosen design**
   The remaining screens: Director approvals, Master Document List, the full filing steps and every document status.

2. **Agree an implementation plan**
   Scope, timing and testing, presented for approval before any build starts.

3. **Build and test with field users**
   On real phones, on site, before release.

> Until a direction and a plan are approved, nothing changes in the live RISE system.
